***Response to Amendment***

***Allowable Subject Matter***

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record neither teaches or suggests a unitary over-the-needle catheter as claimed wherein of a single unitary catheter having an integral distal end that has a harder material than the balance of the catheter. The prior art describe a catheter having multiple discrete parts that are assembled to form the claimed catheter; namely, (i) a catheter body, (ii) a rigid, tubular sleeve, and (iii) a distal tip member, each of which is shown by example in the specification as components 46, 54, and 64. Without the "sleeve" claimed in the :893 patent, the "distal tip member" cannot be connected to the main catheter body. In contrast to the :893 claims, Applicant's present application claims a catheter of unitary construction wherein the distal end is integral with, and not discrete from the catheter itself. Although making integral what was once separate parts is not novel in the process an interface between the separate parts is eliminated and therefore the ease of insertion is enhanced.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
